PROFESSIONAL SUMMARY

Computer Science student with hands-on experience building object-oriented applications in C++. Skilled in problem-solving, debugging, and Git-based version control, with a track record of designing multi-class systems from the ground up. Looking to grow these skills further through academic and personal software projects.

TECHNICAL SKILLS

Programming Languages: C++, HTML, CSS

Software & Tools: Visual Studio, Git, GitHub, Microsoft Office

Technical Concepts: Object-Oriented Programming, Class Design, Memory Management, Pointers & References, Input Validation, Debugging, File I/O, Version Control, Pull Request

TECHNICAL EXPERIENCE

Current Course Project

Designed and built a C++ console application from scratch using object-oriented programming principles across multiple interacting classes.

Implemented core game/system logic including class design, functions, loops, and robust user input validation.

Managed version control with Git and GitHub, using commits, branches, and pull requests to track iterative progress.

Tested, debugged, and refined the application through an iterative development process, resolving issues in memory management, logic flow, and program state.

Produced technical documentation and delivered a project demonstration.

PROJECTS

Full Shell Asylum

A text-based survival horror exploration game built in C++, in which the player navigates a 5x5 grid-based asylum, managing a single Sanity resource while uncovering items, lore, and three distinct branching endings. Designed a multi-class architecture (Player, Room, Item, Asylum, and

a dedicated GameEndings class) to cleanly separate game state, world data, and win/loss logic. Implemented dynamic, state-driven features including a fog-of-war minimap that reveals only explored areas, conditional menu options based on room contents, and layered sanity mechanics combining passive drain, room-specific hazards, and item effects.

Technologies: C++, Visual Studio, Git, GitHub

EDUCATION

Full Sail University

Bachelor of Science in Computer Science

Expected Graduation: Month Year

Relevant Coursework:

- Programming Fundamentals
- Object-Oriented Programming
- Software Development
- Version Control

EXPERIENCE U.S. Army — Combat Medic 4 Years of Service

- Operated and managed a battalion aid station, providing direct patient care and coordinating treatment for soldiers.
- Tracked and maintained readiness status for hundreds of soldiers, ensuring accurate, up-to-date records used for operational decision-making.
- Trained and mentored fellow soldiers in medical procedures and emergency response protocols.
- Managed time-sensitive tasks and problem-solved under high-pressure conditions, skills directly transferable to debugging and systems troubleshooting in software development.
